

My Dreamy Old Husband

Chapter 322

After checking the photos, Sophia was relieved that it didn't capture any footage of Michael. As long as Michael wasn't in the photo, she had nothing to be afraid of.

It was late at night when Stanley finally left with his dog whereas Sophia washed up and waited for Michael on the bed. Michael looked at the perfectly fair body that was laid in front of him like a delicacy on a white jade plate. Gently, he got on top of her and pinned her to the bed. After pondering, he took out a condom from the drawer.

He longed for a child and Nathan to have a sibling as well. However, Sophia was still young and she had yet to enjoy her life. Besides, she wasn't prepared to be a mother. Therefore, he postponed his plan of having a child to two years later... Most importantly, she had a hard life when she was young and had always suffered from malnutrition.

After she came here, she had been taking traditional medicine to nurse her health. Currently, her menstruation cycle was still irregular so it would be difficult to become pregnant. Even if she got pregnant, it would be difficult to bring the child to term. Therefore, it would be better to nurse her health before having a child.

The next day was a weekend so Sophia didn't have classes. However, she still woke up early as usual. After having her breakfast, she went to the study to work on her own matters. Meanwhile, Hale brought a few of the sneak shot robots that he found yesterday to Michael.

Night had descended and Michael didn't see Sophia and Nathan come out for dinner. Even their lunch was sent upstairs by Maria. Curious, he opened the door to the study and peeked inside, only to see a floor full of parts while Sophia was welding something with an electric iron.

The study was filled with a pungent rubber odor. Among the parts stood a tall robot. Noticing Michael, Sophia immediately waved her hand, beckoning him over to look at the new item that she made. "Dear, look. I made a toy for Nate!"

The new toy was a 1 meter tall robot and looked like it was made up of several small robots. He had no idea how she made it, allowing the new robot to be controlled by one remote control. It was extremely agile. Nathan was overjoyed as he controlled the robot to walk around the room.

Michael crouched and looked carefully at the robot. This was not a simple work that combined a few robots together. In fact, this robot had an extremely delicate and complicated internal structure. It required in-depth professional knowledge to be able to make it. He asked Sophia, "You made this?"

Sophia nodded happily. "Yeah. I memorized it when Stanley dismantled it yesterday."

"You memorized it by just watching it once?" Michael wasn't convinced.

Scratching her head, Sophia said, "I searched for some information on the internet and followed it."

Michael was at a loss for words. He could only stroke her head and praise her, "You're awesome. Keep it up. In the future, you'd be able to dismantle anything you like." Years later, he felt that he was totally crushed by Cooper's gene yet again. Never mind. This gene would be his in the future!

In the past, Sophia's talents did not have the chance to be properly developed due to the restrictions of her environment. Now that the conditions were

favorable, she could do anything she liked and all her talents were starting to surface.

In the past, Cooper was a genius in electronic technology. Mitchell Hi-Tech Group was among the best in the country and occupied a large market share in the world. During its heyday, more than half of the people in the world installed the company's product in their computer.

Even to this day, the Mitchell Family could still stand firmly feeding on Cooper's wealth. Being the son-in-law of such an impressive father-in-law was extremely stressful!

After working on it for two days, Sophia finally assembled the robot. Using the directions that she got from the internet and the knowledge that she learned, she assembled a few robots into one.

The final product stood at 1 meter tall. She then added Nathan's remote-controlled robot into it and upgraded the robot. Now, the robot could even carry out simple instructions through remote control.

Nathan carried the 1-meter-tall robot and played with it excitedly in the garden, controlling the robot with the remote control. The robot could even play in the sand with them, which was more intelligent than those robots in the past.

Furthermore, surveillance cameras were installed all over the robot, which allowed it to give simple responses according to the surrounding situation.

Michael still couldn't believe it. He repeatedly watched the surveillance footage in Sophia's study. In the footage, she dismantled the robot that was created by Huffs Technology and worked on it using her tools as well as changing the circuit. She even told Hale to buy a few more of it and dismantled several robots before assembling them together.

When she met with a question, she would call Stanley or ask Gemma. If she couldn't figure it out, she would look it up on the internet. In just two days, she managed to reinvent a robot. And now, Nathan couldn't stop playing with it.

Scratching his head, Michael felt that he was looking at an upgraded Cooper.

At this time, a group of children were playing with the robot in the garden. They were laughing and the one with the loudest giggle was Nathan. Even Michael had never seen him laughing so happily in a long while. Right now, Nathan was so proud.

Once he showed his toys, everyone was green with envy at him. They envied that he had a talented mother. Nathan himself was extremely proud that he had an impressive mother too! This mother was truly worth every penny!

After playing with the robot for two days, Sophia had to return to university for classes. In the morning, she attended the classes for her major. In the afternoon, she attended classes at the School of Computer Science. When she arrived at the university today, she noticed people looking at her weirdly. Did something happen again?

In the afternoon, when she went to the class at School of Computer Science, someone came to enlighten her as soon as she stepped in the class. "Aunt Sundae Cone, look! Someone fabricated stories that you married the vice chancellor. There are even photos to prove it!"

In general, game design and development students were mostly boys and they were not interested in gossip. However, everyone in the class seemed excited today. Looks like this incident was causing quite a sensation.

Sophia turned on her phone and logged onto Bayside University's forum. As soon as she logged in, she saw the top post, 'Unbelievable! The vice chancellor married a student!'

This post was sent with a real name. The author of the post was a student who was expelled from Bayside University. Although he was expelled, Bayside University's student forum didn't update its information synchronously. Therefore, he could still log into the forum.

This news was even more shocking than the news of a student providing for another student. After all, the vice chancellor marrying a female student was unheard of! There were photos in the post and it looked like it was taken in a living room

. A girl in leisurewear was holding hands intimately with a man in his 50s. The photo wasn't blurred out so everyone could easily recognize that it was Sophia and the vice chancellor.

"This must be the photo that is secretly taken by the robot that day," Stanley suddenly appeared from behind and analyzed it while furrowing his eyebrows.

He had seen the photos in the robot's memory chip and they were indeed identical to photos in the post. It turned out that this was their objective. The vice chancellor married a female student? The person who secretly took the photo truly had great imagination.

As soon as the post was published, it spread throughout the university like a wildfire. Even people who didn't check the forum knew about it. After all, it was the first time they ever heard a vice chancellor marrying a female student. Most importantly, the vice chancellor bought his wife. The vice chancellor had actually spent 80 thousand to buy a female student as his wife?
