

## The Amazing Son In Law Chapter 3764

Abbas couldn't make up his mind at this time. If he was only to complete the task given by Charlie, then he didn't care about the three seven twenty one. If everyone should sell it, they would sell it. What about killing chickens and getting eggs? Killing chickens to retrieve eggs also has to hand over half of the retrieved eggs.

However, he still doesn't know what Charlie's attitude towards these people is, so he can't figure out the yardstick, so he said: "You should first explain the situation of your own assets. If the cash is less than half, pay the cash first. , For the remaining part, we will give you a solution later."

Everyone had no choice but to agree.

As a result, the soldiers of the Wanlong Palace began to register these branches of the Wade Family in batches, first asking each person's specific assets and cash situation, and after the registration was completed, they were required to pay all the cash first.

When this part of the funds began to flow into the Wanlongdian account, the Concorde airliner Charlie took finally landed at Eastcliff Airport.

As soon as he landed, Stephen Thompson took him to Yeling Mountain.

On the way, Stephen Thompson gave a brief report on abbas's situation to Charlie, and at the same time reported Abbas's inaccuracy to Charlie, and asked, "Master, when I came, Abbas asked Charlie. Let me ask you, what should I do with those people whose cash is less than half of the family's assets and most of their assets are in real estate and fixed assets?"

Charlie said indifferently: "You have a good attitude towards those who admit mistakes and punish them. Of course, you can't push too hard. You can collect some of the cash first. As for the remaining part, let them pay in installments."

Speaking of this, Charlie paused slightly, and then said: "According to normal terms, the installment must pay interest. However, even if it is the Wade Family, I will give them a bit of face, and the installment will not be They are charged interest, but like banks, a certain percentage of handling fees will be charged."

"For example, if the other party owes us one billion, it can be paid in 12 installments a year, or 36 installments in three years, and 60 installments in five years. Six million."

Stephen Thompson was stunned and exclaimed: "Master, if you use this ratio, the handling fee for the first phase is 6 per thousand, and the total handling fee for the 60 phases is 36%! One billion principals, The handling fee is three hundred and sixty million yuan, is it too high..."

Charlie smiled and said, "Doesn't the bank credit card installments always pay six thousandths per instalment? I also confiscated the overcharge, but just look at the bank."

Stephen Thompson hurriedly said, "Master, I said so, but the interest...oh no, the handling fee ratio is actually very high...I'm afraid they won't be able to sustain such a high handling fee..."

Charlie looked like a profiteer, and said seriously: "It doesn't matter if you can't hold it. I can give them another choice. The money owed will be converted into the corresponding equity of their company according to a certain preferential strength, such as his corporate value. Five billion, but still owe us one billion. Normally, this one billion converted into equity is 20%, but because they owe us, I don't charge him the installment fee, so I have to receive a cash discount. Therefore, we have to give us a 20% discount on the total valuation. In this case, if a company with 5 billion yuan is discounted by 20%, even if it is 4 billion, the 1 billion debt converted into equity is 25%!"
