

Chapter 771 The Gravitational Challenge

As everyone passed through the blue curtain, they entered a novel environment.

A sudden surge of gravitational force caught them off guard, causing some to lose their footing and tumble to the ground.

Liam's body quivered, his pre-existing imbalance now exacerbated. He struggled to maintain his stability, relying on his crutch for support.

Before him stood a colossal ring-shaped mountain. According to Emmeline, it comprised twenty-eight thousand and four hundred steps that needed to be ascended to reach the summit.

The participants in this trial were not average individuals. In the outside world, these steps might not be considered a significant hurdle, but the heightened gravitational forces on this mountain made it a formidable challenge.

Climbing the mountain was an arduous task for Liam under his conditions.

The aloof girl who had initially convinced Liam to

As everyone passed through the blue curtain, they entered a novel environment.

A sudden surge of gravitational force caught them off guard, causing some to lose their footing and tumble to the ground.

Liam's body quivered, his pre-existing imbalance now exacerbated. He struggled to maintain his stability, relying on his crutch for support.

Before him stood a colossal ring-shaped mountain. According to Emmeline, it comprised twenty-eight thousand and four hundred steps that needed to be ascended to reach the summit.

The participants in this trial were not average individuals. In the outside world, these steps might not be considered a significant hurdle, but the heightened gravitational forces on this mountain made it a formidable challenge.

Climbing the mountain was an arduous task for Liam under his conditions.

The aloof girl who had initially convinced Liam to leave now stood by his side. She observed him closely but refrained from speaking.

Interestingly, the aloof girl seemed to navigate the increased gravity more gracefully than the rest, taking the lead in the ascent.

Liam watched her closely, intrigued by her apparent ease in the heightened gravitational environment.

As time passed, the rest of the group adjusted and began their ascent in succession.

Before long, the team naturally divided into three groups or echelons. The first consisted of the aloof girl, while Bryan led the second. Liam, still adapting to the situation, found himself at the rear of the third group.

While scaling the mountain, Bryan turned around and taunted Liam, "Cripple, can you even make it up this mountain? If not, spare yourself the embarrassment and return home."

Liam chose to ignore Bryan's mockery. In these conditions, maintaining a steady breathing rhythm was paramount. Shouting like Bryan wouldn't get anyone to the summit in this high-gravity environment. Seeing Liam's lack of response, Bryan assumed it was due to breathlessness caused by the gravity.

With a smug grin, Bryan continued, "You cripple, why pretend to be strong here? Do you think you can soar with that crutch? Just stay here and watch me reach the top."

After this declaration, Bryan gritted his teeth and increased his speed, pushing his way to the front of

the second echelon.

Observing this, Liam sneered silently, thinking Bryan was a foolish and hopeless individual.

Unbeknownst to Bryan, if Liam chose to unleash his full speed, he could easily have moved into the first echelon. However, Liam didn't deem it necessary.

Liam understood that being at the forefront temporarily wouldn't achieve much. He believed that only by reaching the mountain's summit could he prove his abilities.

Furthermore, if he expended all his energy now, he wouldn't have the strength to continue the climb beyond the halfway point.

As everyone continued their ascent, the gravitational pressure intensified, causing even the aloof girl at the front to break a sweat. Many were gasping for breath as if their feet were encumbered with lead.

At this juncture, only Liam's countenance began to relax. It wasn't that he didn't notice the escalating gravity, but he observed that, under this gravitational pressure, his sense of imbalance was gradually disappearing.

Could it be that the gravity in this place was somehow aiding his balance?

Liam found himself perplexed. Unbeknownst to him,

Chapter 771 The Gravitation  +120 Points at most

the key to his improved condition lay in the blow delivered by the examiner just before he entered the blue curtain.
